Kaepa®

Designed with intention since 1975.

Product Guide

Kaepa designs with intention.

It started with a broken shoelace. Mid-match in 1975, founder Thomas Adams tied the two halves separately and the fit improved. He split the lace on purpose, divided the vamp, and patented the double-lace shoe Kaepa was built on. In 1990 the same thinking produced the first shoe made specifically for cheer.

Thomas Adams with the double-lace, split-vamp prototype, 1975.

01

OBSERVE

Watch what athletes actually do, including what teammates do with the shoe.

02

IDENTIFY

Name the specific problem, not a general benefit.

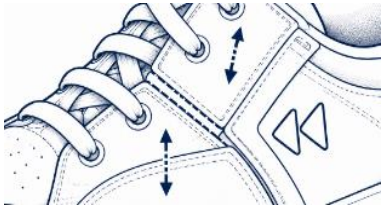

03

DESIGN AROUND IT

Change the construction until the shoe solves it.

THE METHOD IN PRACTICE · KAEPA INVENTIONS

1970

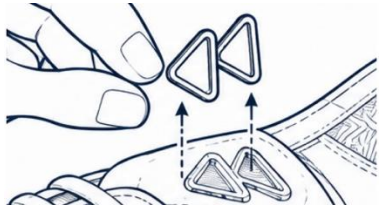

Independent fit

Split vamp with two laces: forefoot tight, instep comfortable.

IN THE LINE · DOUBLE LACE SPLIT VAMP

U.S. PATENT 3,546,796

1989

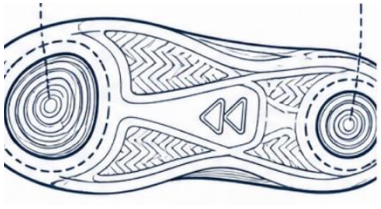

Swappable identity

Snap-in triangular sockets, so one shoe can change its color.

IN THE LINE · THE DELTA

U.S. PATENT 4,837,960

1990

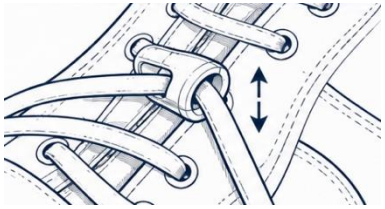

Targeted cushioning

Inserts at the ball and heel only, so the rest of the sole stays firm.

FAMILIAR TODAY · ZONED CUSHIONING

U.S. PATENT 4,897,936

1990

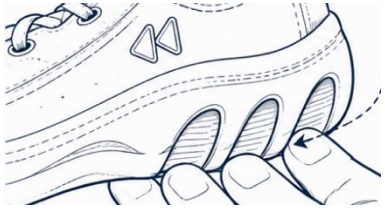

Locked-in tension

Locking eyelets hold forefoot tension when the top is tied.

FAMILIAR TODAY · LOCKING EYELETS

U.S. PATENT 4,899,466

1996

Built to be held

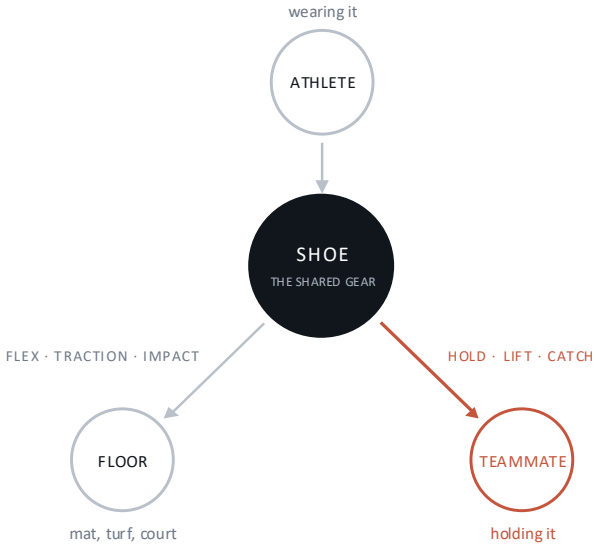

Finger grooves at the heel for the athletes who lift the flyer.

IN THE LINE · FINGER GROOVE

U.S. PATENT 5,513,449

Cheer asks more from a shoe.

Most sports put a shoe between two things: the athlete and the ground. Cheer adds a third. During a stunt your shoe stops being only your equipment — it becomes the thing a teammate holds, lifts and catches. These are the six things Kaepa designs around. Every Kaepa cheer shoe answers all six. What changes is how.

01 FLEX

How the shoe moves with the athlete.

A cheer foot points, bends, springs, and plants sideways within a single eight count. A sharp toe point requires the forefoot to flex cleanly and hold its line. Quick transitions demand lateral support, while jump takeoffs require immediate snapback. Cheer movement is multidirectional, so a shoe must adapt to every angle.

02 TRACTION

How the shoe connects to the mat.

Cheer movement is nonlinear. Athletes need grip during rapid stops, tumbling transitions, and quick directional changes, plus a clean release when initiating a jump or turn. Outsole traction must grip the floor in every direction without catching or dragging on full turn transitions.

03 IMPACT

How the shoe absorbs force on impact.

Tumbling passes, jump sequences, and various stunt landings all end back on the mat. That shock happens dozens of times a practice and hundreds in a season. Cushioning absorbs heavy impact while stabilizing the heel on every stick landing.

04 LOCK-IN

How the shoe locks the foot in place.

If the heel lifts inside the shoe during a jump takeoff or stunt entry, execution suffers. Heel lock is what holds that connection through takeoffs, tumbling, and the top of a stunt. It keeps the foot anchored so athletes can transition without delay.

05 STUNT

How the shoe works in a teammate's hands.

Under a stunt the shoe stops being only the athlete's equipment. A base's hands wrap around the arch, heel, and sidewall in a fraction of a second under load. Finger grips and smooth sidewall contours give bases and back spots a definite place to hold and control the flyer's foot.

06 SPIRIT

How the shoe represents team identity.

Cheer combines athletic performance with unified team identity. The shoe is a core part of the uniform on the warmup mat, under stadium lights, and on the competition stage. A great cheer shoe carries that pride through every performance.

Kaepa designs around six systems.

01 FLEX

Letting the shoe bend and turn where the foot already does.

Flexible Performance Strobel	Replaces the stiff lasting board so the forefoot can bend through toe points and takeoffs.
Transverse Flex Tunnel	Leaves a channel across the outsole so the shoe folds at the same place the foot does.
Mapped PU Gauges	Places heavier material where the shoe is loaded and lighter material where it has to move.
Micro-Dot Toe	Wraps the toe in a thin textured layer that holds on a drag and still folds at full point.

02 TRACTION

Making traction work in every direction cheer moves.

Multi-Directional Tread	Sets tread edges facing every direction, so grip holds whichever way the athlete moves.
Forefoot Spin Pad	Creates one defined rotation point under the ball of the foot for turns and transitions.
Transverse Breaking Bars	Runs raised bars across the foot to push against on a stop instead of rolling over.
Abrasion-Resistant Sole	Uses compounds and surface texture chosen to hold their grip as the outsole wears.
Low-Relief Sole	Keeps the tread shallow so nothing catches part-way through a turn.

03 IMPACT

Managing what arrives at the heel first.

Cushioned Cup	Carries the midsole walls up around the heel so a landing is caught rather than sat on.
APX Heel Cushion	Builds the footbed up under the heel, where a jump or a dismount arrives first.
Memory-Foam Foundation	Puts a memory-foam layer directly underfoot, with firmer structure beneath it.
Layered EVA	Stacks specified EVA layers into a platform that stays firm through a long session.

04 LOCK-IN

Keeping the foot where you put it.

Lace Lock / Heel Lock	Routes lace tension behind the ankle so the heel stays down through a takeoff.
Secure Fit	Holds the tension the athlete tied instead of letting it work loose across a routine.
Webbing Eyestays	Carries lace tension off the eyelets and down into the sidewall of the shoe.
Heel Containment	Works counter, collar foam and Achilles padding together to close the gaps around the heel.

05 STUNT

Shaping the shoe for the hands that hold it.

Finger Groove	Cuts a defined seat into the heel for a base's fingers during a grip. U.S. Pat. 5,513,449.
Heel Notch	Creates a heel landmark a base or backspot can find without looking down.
Slim Stunt Arch	Draws the midfoot waist in so a palm can close around it under load.
Contoured Arch	Shapes the arch for a hand to wrap around rather than cutting a recess into it.
Ribbed Sidewall	Adds ribs along the sidewall — structure under load, texture under a hand.

06 SPIRIT

Letting the shoe carry identity — and change it.

Interchangeable Delta	Unsnap, change, snap in. The quarter Delta lifts out and another takes its place. U.S. Pat. 4,837,960.
Unlimited Color Combo	The color program behind the snap-in system, so one pair can carry many combinations.
Team and Personal	Branding, color and finish chosen to sit inside a uniform or stand for one person.

Descriptions state what each construction is intended to do. They are not claims of measured performance.

OPTIMIZED FOR	unrestricted forefoot movement and one defined place to turn.	a platform that stays flat and controlled while you carry load.	moving freely and giving a base something definite to hold.	structure and material that hold their shape through long sessions.	one shoe for every surface — and color that changes with the uniform.	easy-care, all-around wear with a Delta you can change.

Catalyst AM1 6700 / 6700Y

A board-less, mesh-built competition shoe that bends with the foot and turns on one defined pad.

Lateral profile and outsole, toe to the left. Callouts mark the construction on the part of the shoe where it exists.

SIGNATURE

TRANSVERSE FLEX TUNNEL · FOREFOOT SPIN PAD · CUSHIONED CUP · LACE LOCK · SECURE FIT · FINGER GROOVE · SLIM STUNT ARCH

HOW THIS SHOE ANSWERS THE SIX SYSTEMS

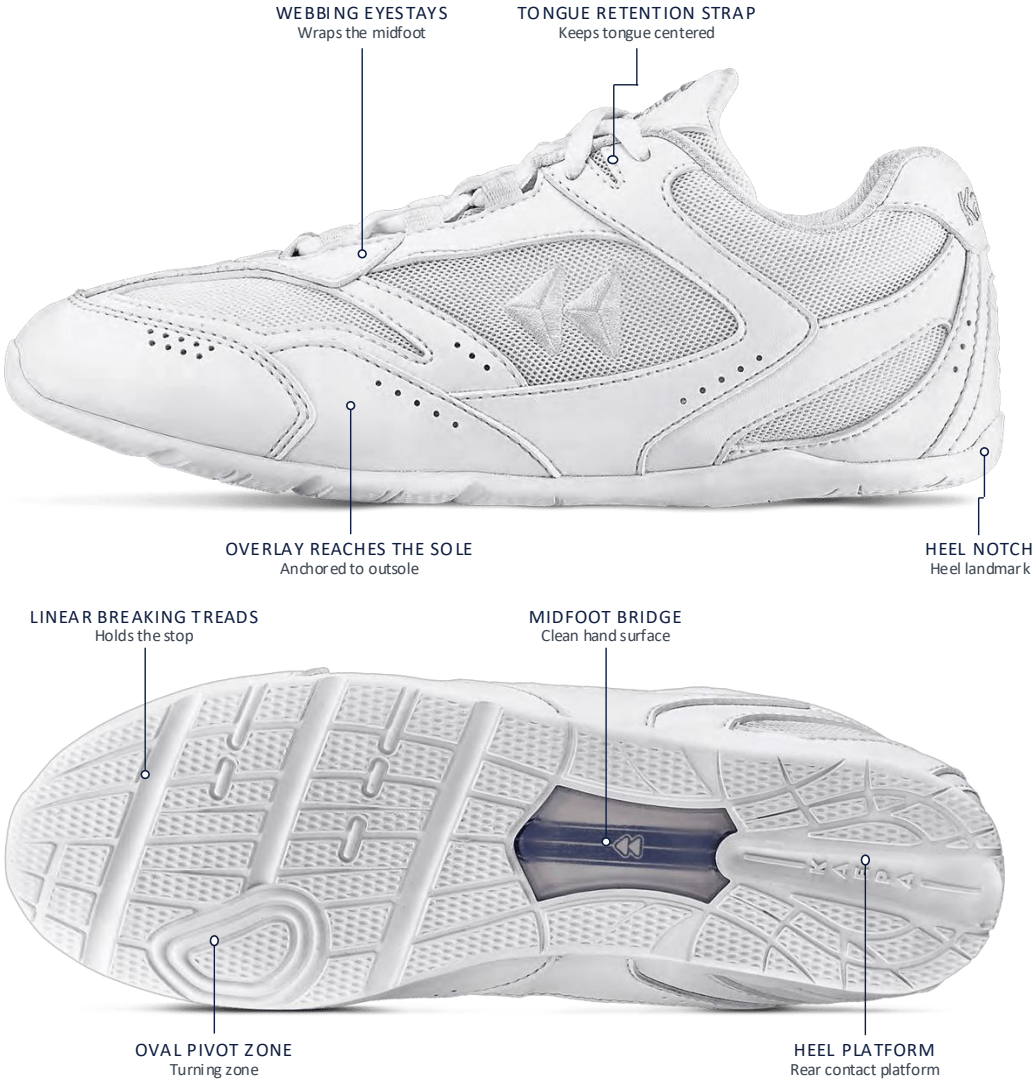

STUNT	Slim Stunt Arch + Finger Groove	A narrow waist and a molded heel seat shape the shoe around a base's hand.
FLEX	Transverse Flex Tunnel + Flexible Performance Strobel	The sole bends where the foot bends — on foam, not on rubber.
TRACTION	Forefoot Spin Pad + Low-Relief Tread	One defined place to turn, on a shallow field that will not catch mid-rotation.
LOCK-IN	Secure Fit + Lace Lock + Achilles Pods	Lace tension routes behind the ankle; two pads seal the gap at the collar.
IMPACT	Cushioned Cup + bonded underfoot foam	Midsole walls cradle the heel; the cushioning is built in rather than stacked on.
SPIRIT	Competition white	Heat-sealed marks

PERFORMANCE LEVEL	Intermediate to Advanced Competition

Snap In, Stand Out

One shoe. Infinite colorways. Swappable, mix-and-match Deltas snap securely into compatible Kaepa footwear.

01 **In place**

Two Deltas sit in the quarter panel, each held by a base stitched into the upper.

02 **Unsnaps and snaps**

A groove runs around the edge of each Delta and a rib inside the base holds it. Flex it and the Delta snaps out; press and it snaps back in.

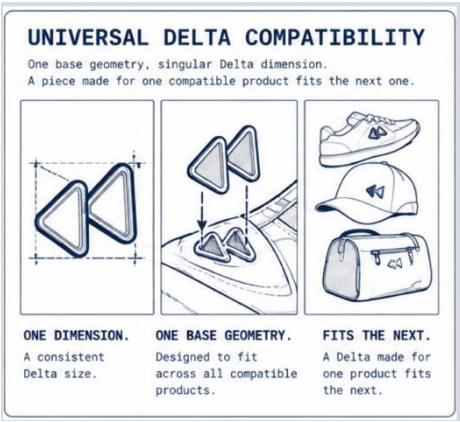

03 **Change the look**

Press a different Delta into the same base and it snaps in. The base stays. The Delta does not have to.

WHAT A DELTA CAN HOLD

DELTA COMPATIBILITY	Every Delta base and Delta piece follows the same standard, so any Delta fits any Delta-compatible product

BUILT FROM TWO PIECES OF KAEPA HERITAGE

1975

The double lace split-vamp

A modern take on the 1975 double-lace classic: the split vamp Kaepa started with.

1985–1989

The interchangeable Delta

The same quarter-panel base that carries a Delta on Cheerful and Cheerlyte, on a shoe built for off the mat.

INCLUDES MODERN SHADE MATTE PACK

7 COLORS, INCLUDING:

- Blue
- Dark Grey
- Green
- Orange
- Purple
- Red
- Yellow

WHO IT IS FOR

Athlete
Off the mat, same colors.

Coach
Leading the team, repping the program.

Parent
Standing behind the athlete, wearing the brand.

Supporter
Supporting from the stands in team colors.

Double Lace Classic L1210

The shoe Kaepa started with in 1975.

Double Lace Classic is the original Kaepa: the 1975 split vamp and double lacing, with Swirl K branding, fit and last. It is a lifestyle shoe, not a cheer performance shoe, and it sells year-round beyond the cheer season.

Lateral profile. Full grain leather upper with the original Swirl K branding.

PRODUCT DETAILS

SOLD AS	Unisex
SIZES	Men's 3.5–12, 13 Women's 5–13.5, 14.5 19 sizes total
UPPER	Full grain leather
LINING	Pig suede
CLOSURE	Double lace, split vamp
BRANDING	Original 1975 "Swirl K"
EXTRAS	6 sets of laces included

BUILT ON THE ORIGINAL KAEPA DESIGN

1975

The double lace

The patented split vamp and dual lacing that began with Tom Adams's broken-lace fix.

1975

The Swirl K

Original Kaepa "Swirl K" branding, fit and last, unchanged from the first shoe.

INCLUDES 6 SETS OF LACES

SWAP LACES TO CUSTOMIZE THE LOOK

6 sets of 10MM flat laces included

- 2 sets short white (double) — affixed
- 1 set long white (single)
- 2 sets short navy (double)
- 1 set long navy (single)

Conversions are Kaepa conversions. They are not generic retail conversions and should not be substituted with one. Sizing is based on Brannock® device measurements and is for reference only — Kaepa U.S.A., Inc.® cannot guarantee fit. Trying shoes on before purchase is always recommended. Your Authorized Kaepa Dealer can check the fit for an athlete or a squad and handle team orders. kaepa.com · customerservice@kaepa.com · +1-972-296-7300

BEFORE YOU ORDER

Order your usual size
Kaepa cheer shoes are built to a standard medium width — B for women. If your feet are wider, consider going up a half size.

Measure later in the day
Feet expand as the day goes on, sometimes by as much as a full size.

Fit the larger foot
One foot is usually slightly bigger than the other. Choose your size from the larger of the two.

WHEN THEY ARRIVE

Try them with cheer socks
Wear the socks you will actually compete in.

Stand up and walk
The lace holes should stay evenly spaced. If they splay or close up, try a different size.

Leave a thumb's width
At least half an inch between your longest toe and the end of the shoe, measured standing.

Snug, not tight
You should be able to wiggle your toes comfortably.

BUYING FOR A GROWING ATHLETE

Children's feet grow fast
Up to two sizes a year is normal. Leave about a thumb's width beyond the longest toe and re-check the fit each season.

One shoe for the whole squad
Every Kaepa cheer model is produced in both women's and youth sizing, so a wide age range can compete in the same shoe.

WHICH BLOCK DO I USE?

CHEER	Women's or Youth
L1120 · L1210	Unisex
WIDTH	Standard medium — B for women. Wider feet should consider a half size up.
